FN2570

Extra-flat Pedal Load Cell

SPECIFICATIONS

- Range 200 to 2500 N (40 to 500 lbf)
- Stainless Steel material
- Cable Output
- Very easy fixation

The **FN2570** load cell has been developed for pedal force testing. It attaches easily on all types of pedals and test rigs for endurance and fatigue tests, especially where size is an important factor.

The force is measured with high precision independent of the point of application of force. A strain relief spring strengthens the cable output.

A similar pedal load cells with a better accuracy 1%FS and integrated amplifier option exists as model **FN2114**.

With many years of experience as a designer and manufacturer of sensors, Measurement Specialties, Inc. often works with customers to design or customize sensors for specific uses and testing environments.

On request, Instruction documents can be provided to ease the selection and use of our sensors and provide helpful tips.
